Subject: Use of Leaded Fuels in Gasoline Burners

Dear Bob:

We have now completed the investigation which I mentioned to you quite some time ago, of the performance of various gasoline burning appliances when operated on leaded and non-leaded fuels. I am sending you herewith two copies of our Report LTD 48-31 covering this work. This gives us all the information we want for our own use, and also for occasional discussion with users or manufacturers of this kind of equipment. We have not considered the health angles of the problem, and I presume that with our data before you, you will be able to decide how much you should be concerned with the hazards involved in the operation of these burners.

Very sincerely yours,

George Calingaert
Associate Director of Research
