Dear Don:

I'm writing up the Arodan work for publication, and as usual when I review reports, I find some mistakes. Please check Table III of IBT J8746. For T-I 251 + 178 = 429 not 458. If 429 is correct the percentages would be 58.5 and 41.5. Please advise.

In J7300 p 3 H. it should say 12.5 at 1 and 10 (not 100) had no effect.

All goes well with us here. We have been quite occupied with household and landscaping projects but are finally catching up. The weather has been poor for the last three weeks. We've even had some transient snow a couple of times. This is very unusual according to the natives.

I hope that all goes well with you.

Sincerely,

Otis

How old were the chickens when acquired? Being started at 12 weeks. I assume that these were of the Marek strain.
