COMPANY-WIDE CONFERENCE ON HEALTH EFFECTS
OF DUST FROM THERMAL INSULATING MATERIALS

Attached is information describing a proposed conference in the Wilmington area May 29 and 30, 1974, to discuss the health effects of dust from thermal insulation materials including asbestos. This conference is in response to the numerous questions that have been rising concerning monitoring, measuring, and analyzing dust from materials other than asbestos in view of our program to eliminate the use of asbestos containing thermal insulation.

If you or anyone at your site is interested in participating in this program, please notify F. H. Fuller at Louviers as soon as possible, submitting the names of the individuals who would be expected to attend, along with a charge code to defray expenses of the conference.
