St. Louis, Missouri 63166

Dear Mr. Fallon:

In your June 8 letter concerning your Therminol FR series, you advised that after July 31, 1970 you will no longer sell these fluids for our application. Can we assume that you will accept orders from us through that date? Please clarify.

On the suggested usage of Therminol 66, the following questions come to mind:

1. Will this fluid perform as well as our present fluid in terms of heat transfer? My concern is whether or not any equipment change would have to be made.

2. What are the flammability characteristics of Therminol 66? As I recall some earlier conversation it is considered flammable. This information is needed for appraising fire and explosion hazards, if any.

3. What is your experience on making a replacement of Therminol FR fluid with Therminol 66?

I tried to phone you today with these questions in mind...was unable to make contact. I would appreciate your call for our discussion if you have any questions.

Sincerely,

FRITO-LAY, INC.
