October 21, 1938
Dict. 10-20-38

Dr. Robert A. Kehoe
Kettering Laboratory of Applied Physiology
University Hospital
Cincinnati, Ohio

Dear Doctor Kehoe:

Yesterday afternoon, October 19, 1938, Mr. [REDACTED] brought the specimen jars with urine and feces to Doctor Hixon's office. Today I shipped them out to you by express, and also sent along a crate which has a used but unfilled urine jar, and also an unused feces jar.

Mr. [REDACTED] called at the plant today and at that time I obtained two separate samples of blood, which were mailed immediately to you, as you requested.

Mr. [REDACTED] is also filling up another jug with urine and I will forward it to you directly when I receive it from him.

At the present time I would say that he looks and feels very well, except that he caught a rather severe cold on his chest last week and he is not quite up to par from that.

The case came up in Court yesterday and I believe that the records of the Buffalo Hospital are going to be brought into Court so you will undoubtedly hear more of this case from Mr. Jenkins in the near future.

In my hurry to get off the large containers to you I neglected to label the bottles so I am taking this time to tell you that the full urine jar and the feces sample are from the patient, Mr. [REDACTED]

Very truly yours
