BFG RESTRICTED

We have received information that there may be some publicity in the papers shortly involving a new PVC situation.

The information below is to be held by you for possible use at an appropriate time. If Firestone is able to provide additional more complete data, comment will be made through the Society of the Plastics Industry. Please advise promptly if there is any publicity in your area on this subject.

November 13, 1975

FIRESTONE TIRE AND RUBBER COMPANY
POTTSTOWN, PENNSYLVANIA, PLANT

We have received a preliminary and incomplete report from industry sources on a study which has been conducted among workers at Firestone's Pottstown, Pennsylvania, plant. This survey was conducted jointly by the University of North Carolina, the National Institute for Occupational Safety and Health (NIOSH), and the Center for Disease Control.

Firestone's Pottstown facility produces a broad range of rubber and plastic materials, including PVC.

Incomplete and fragmentary data have indicated that wives of workers in vinyl chloride polymerization areas had a higher rate of fetal deaths (miscarriages and stillbirths) than a control group made up of wives of rubber and plastics fabrication workers.

We are unable to comment until 1) we have received more complete and conclusive information and 2) our medical staff and environmental specialists have had time to review and interpret the data.

Again, we want to emphasize the preliminary and fragmentary character of this information. We shall keep you informed of any new developments.
