

Now you can quickly produce PATTERNS, CORE BOXES FROM 2" TO 8" THICK!

DON'T MISS THIS NEW SOUND-COLOR MOVIE!
"Plastics Tooling and Patternmaking with EPOXICAL Resins" shows how ULTRACAL Gypsum Cement molds are made to produce plastic foundry patterns. See plastic match plates, core boxes, and cope and drag equipment being made—quickly, with improved accuracy, at reduced cost! See how EPOXICAL can help you! For FREE showing—mail coupon!

Shown are typical plastic foundry patterns that can be made from EPOXICAL® Laminating Resins, or the new EPOXICAL Mass Casting Resins. Now, with new EPOXICAL Mass Casting Resins, you can cast foundry patterns and core boxes much faster, without excessive heat or exotherm. No cores are required!

New Freedom and Scope in Pattern Production with U.S.G.'s Scientifically Formulated Materials!

From United States Gypsum—your one-source supply—comes a complete line of gypsum cements and plastics for time- and money-saving tool and patternmaking. These include the new EPOXICAL Mass Casting Resins.

New EPOXICAL resins now enable you to produce foundry patterns and core boxes in a new range of thicknesses—from 2 to 8 inches—with caliper precision, greatly expanding the margins of your tool and pattern production.

EPOXICAL Mass Casting Resins, like all EPOXICAL Tooling Resins, are amazingly durable and workable. They're readily adaptable to both short-run and mass-production requirements.

For further information, mail the coupon below, or contact your U.S.G. representative. He'll help you select the products best suited for your pattern or tooling operations.
