Mr. P. W. Spink

Roberts 3

On February 7th you sent a memo to Mr. Darby requesting work on a hot melt adhesive and Western Lithographers of Racine, Wisconsin.

Subsequently, we have learned through a call report on Colton Chemical Company by Mr. D. H. Bechtold, that Colton has suggested a formulation to subject account for this application. A formulation in part contains Technical Santicizer 41. It evidently satisfies Western Lithographers.

That account, as a result, is a 10 - 100,000 lbs./yr. prospect for Technical Santicizer 41.

Though this is for your information, it may alter your thinking on the laboratory evaluation of the competitive adhesives and recommendations for a substitute.
