

(Drislane - Purcell)

1 the catalog saying recommended procedure for handling
2 asbestos brake linings or whatever the title was, something
3 like that.

4 Q Was this not the Institute's view at the time of
5 the OSHA regulations in 1972 on asbestos?

6 MR. FRIESTEDT: Objection.

7 A Nobody gave any thought to it. Or at least I
8 didn't give any thought to it.

9 Q What occurred in the approximately six years
10 between OSHA's regulation of asbestos and the point in time
11 approximately when you believed the FMSI developed this
12 viewpoint that anyone working on brakes needs protection from
13 asbestos?

14 MR. FRIESTEDT: Objection.

15 A Oh, gradually as OSHA came out with their proposed
16 regulations and the first regulation might have been the
17 maximum of five fibers per CC or something like that
18 effective some date maybe 1992 or '93, we got that
19 information out to our members. And then when they dropped
20 it down to two fibers or whatever they did, they changed it
21 and then they dropped it down to zero point, all this is
22 going on continually. I can't give you a cutoff date, but
23 sometime about when OSHA started, OSHA started investigating
