Results of Safety Contact
with Frank Sullivan in 35P

REFERENCE

TO

J. A. Glass

Frank is a very convincing safety topic expert. According to him, suggestions for a revised scaffold to go inside mixing units in 35P for workovers have been ignored or postponed. Frank feels that scaffolding shaped to fit inside the round walls of the mixers would add to safer working conditions when drilling out polymer left behind on baffles after blasting. Frank believes a hazard now exists for the boilermakers who must lean over as much as a 40-foot drop to do their work.

I promised him I would bring the matter directly to your attention.
