

NILFISK exhaust filter

improves air quality in high-hazard workplaces

Pharmaceuticals

By using the Nilfisk exhaust filter, the operator is protected against dangerous dust exposure while cleaning equipment.

Lead

In spite of strict employee protection measures in force where lead compounds are processed, hazardous dust is generated when components are moved. Vacuuming with a Nilfisk machine equipped with exhaust filters is the best way to prevent this dust from being raised and inhaled.

Ceramics

The dangerous microscopic dust found in ceramic works causes silicosis. It is so fine, that only by using Nilfisk exhaust filters, can it be dealt with hygienically.

Health Care Facilities

To maintain the highest possible standards of hygiene, use Nilfisk vacuums fitted with exhaust filters, for effective control of dust-borne bacteria.
