and on for a period of about a month in 1960, off and on for a period of about seven months in 1964, off and on for a period of about two months in approximately 1963, for several more months, off and on, for about six months in '67, and for about three months off and on in 1970, Mr. Vandergucht was exposed to dust created by the handling, use and application of Kaylo pipecovering, and block manufactured by Owens-Corning Fiberglas, which was used on jobsites by pipecoverers in the same fashion that I have previously described, that they were cut and sawed around him and that they created -- their use created asbestos-containing dusts which he had inhaled.

MR. McGOWAN: Objection for the record, Your Honor.

THE COURT: Overruled.

BY MR. IGNATOWSKI:

Q I want you to assume that that product, when it was manufactured by Owens-Corning Fiberglas, contained 15 to 20 percent asbestos, one-half to two-thirds of that percentage was amosite, one-third to
