The Shanghai Health Study is a major project of Shell, along with 4 other sponsoring companies (BP, ChevronTexaco, ConocoPhillips, and ExxonMobil), to study the potential effects of benzene exposure on human health. The study is being done in Shanghai, China. An earlier NCI (National Cancer Institute) study was done there with questionable results and there are still high exposures to benzene in places like shoe factories.

Nancy Sullivan has been the business sponsor. Now that Nancy is moving to a new position, we need to transition with the new Base Chemicals business.
