During the period July 10, 1967 to October 15, 1967, 23,910 lbs. of arachlor 1232 was used in C.P. 89% of this material came out the evaporator stacks, 6% out the reactor stacks, and 2% out the finisher stacks.

Material in the north ditch samples was 1254. No 1232 has been detected in recent samples. Perhaps we should sample the roof tar.
