OUR REF. HF/MB.

YOUR REF.

27th September, 1939.

Dr. R.A. Kehoe,
(Dept. of Physiology),
College of Medicine,
University of Cincinnati,
Cincinnati,
Ohio,
U.S.A.

Dear Dr. Kehoe,

I wish to refer to my letter of the 26th July last in which I referred to an instrument which I saw in the course of development in the laboratories of the Cambridge Instrument Co. Ltd. for the determination of very small concentrations of metals in solution.

The Cambridge Co. have just sent me a leaflet they have published which describes this apparatus, and I am sending this on to you in case you may be interested. In acknowledging this to the Cambridge Co. I have asked them specifically whether they have undertaken any work on a solution of organic metallic compounds, and if I can obtain any more concrete data from them I will pass it on to you.

Yours very truly,

H. FOSSETT.

P.S. The Cambridge Company offer, in sending us this information, to carry out tests on specific samples. If you would care to avail yourself of their offer perhaps you could prepare several standard samples to act as comparisons and then several test samples the concentration of which would be unknown to them in order to get them to check back on these.
