UP-DATE OF CMA TABERSHAW-COOPER STUDY

As discussed on the telephone, there seems to have been an omission in keeping you posted on the activities of the CMA in updating the Tabershaw-Cooper study. This study was completed and reported by Equitable Environmental Health in January 1978.

Copies of some of the pertinent correspondence and the protocol are enclosed, since some of our vinyl/vinylidene people will be involved. I have spared you by sorting out a lot of the paper but you are welcome to use my files if you want to.

I am assuming that the various Dow locations have been or will be informed that the records of their employees will be needed. These will be the same men included in the earlier study. Harry Mohlmann has agreed that the funding formula is acceptable to Dow.

If you have need for more information, please let me know.

CMA AD HOC COMMITTEE - VINYL CHLORIDE EPIDEMIOLOGY STUDY

Ted, your proposal for prorating the costs of this study are fine.
Inorganic Chemicals supports.
