Mr. S. J. Stempien  
EED Files

Two all-day asbestos samples were taken by St. Louis personnel and submitted to EED for counting. The results are summarized below:

| <u>Sample Identification</u>            | <u>Time (min)</u> | <u>Fibers/cc (TWA)</u> |
|-----------------------------------------|-------------------|------------------------|
| Raw Material - High Lift Operator (5/9) | 480               | 0 0.50                 |
| Raw Material - Unloader (5/9)           | 480               | 1.16                   |

It is suggested, when the opportunity is available, that two 15 minute samples be taken on each of these job classifications when they are inside the box car during the unloading of asbestos so that the peak ceiling concentration may be determined.

If you have any questions, please let us know.
