

There are many applications which ~~for which we cannot~~ to prevent conversion which are extremely difficult to control which we will discontinue but we will retain the business with acceptable product substitutes.

(Show transparency)

This chart is a summary of those applications for which we either have or will have substitutes.

The formulations for sealants, coatings, and Industrial Fluids consist of biodegradable Aroclors, chlorinated terphenyls (Aroclor 5000 Series) or phosphate esters ~~or paraffin~~ ingredients such as glycol.

NEV 021490

In the NCR paper application we are applying considerable pressure on NCR to accelerate the conversion to products we manufacture.
