SUBJECT: Non-Asbestos Program: Machine Modifications for Better Slurry Flow

Please attend a discussion meeting at 3:00 p.m. in the salaried cafeteria today, August 14th. The purpose of the meeting is to consider possible modifications to existing PROFAX machines which might help in the flow of slurry and reduce the recent problem of settling out and blockage which we are experiencing with the new non-asbestos slurries.

Messrs. Jan Beckman and Tore Forsberg have been invited because it is felt that their experience in PROFAX machine design will be helpful in the discussion.

It should be noted that the starch binder project is to take priority over the non-asbestos program at the present time, but since any proposed engineering changes require time for design and ordering of equipment, this discussion is relevant immediately to enable such changes to be planned. It is anticipated that we shall be back on the non-asbestos program within two weeks.
