

"THE YEAR OF CHALLENGE" *Fruehauf / N. G. Brown*
ABEX FRICTION PRODUCTS GROUP *Δ file*

February 13, 1975 *copy filed 2-21-75*

To: ALL DISTRICT MANAGERS

Bulletin No.: S-75-22 AB

Subject: CARLISLE CORPORATION - MOLDED MATERIAL DIVISION

We have seen some increased activity in some marketing areas by Carlisle Corporation. For your comparison, I am attaching copies of the Carlisle product brochure and the Fruehauf brochure which in effect are one and the same.

As you know, our Private Brand Program has never been designed to compete with our Abex Distributors. However, it would appear that this is not the case with the Carlisle Program as it would seem that Fruehauf has all the advantages over the Carlisle Distributor.

Carlisle Heavy Duty Brake Blocks

**A Complete Family of Quality Brake Blocks
Engineered to Deliver Peak all Around
Performance and Reduce the Cost per Mile
of Brake Maintenance with Safety**

**CARLISLE CORPORATION
MOLDED MATERIALS DIVISION**

Regardless of how particular you are about specifying the brakes on your vehicles, consider that they are no better than the lining with which they are equipped.

All Carlisle mixes offer a high safety factor with stable braking, even in high temperature ranges where fade is usually encountered. When a lining fades, it is not braking and not wearing. Users should consider that performance and safety are prime considerations. Life without performance is no bargain. Since braking friction develops heat and heat causes brake lining wear, thought should be given to means of controlling heat. Heavy-duty drums absorb more heat than light weight drums, and act as a heat sink. They reduce lining temperatures and thereby increase the life of any lining.

CARLISLE LINING RECOMMENDATIONS

TYPE VEHICLE	TYPE SERVICE	LIFE EXPECTANCY*	S-CAM AIR BRAKES		WEDGE BRAKES	
			CARLISLE CODE	FRICTION RATING	CARLISLE CODE	FRICTION RATING
TRUCKS, TRACTORS & TRAILERS 7" brakes or larger equipped with 30 sq. in. chambers or larger	HEAVY-DUTY MOUNTAIN & LEVEL HIGHWAY	AA-1	SEMI-METALLIC MM SM14	EF ✓	SEMI-METALLIC MM SM12	GH
		AA-2	PREMIUM QUAL. ORGANIC MM D39	EE	PREMIUM QUAL. ORGANIC MM D16	GG
		A	STD. ORGANIC MM 141	EF	STD. ORGANIC MM 41W	GG

			COMB. SET***			
MEDIUM & MEDIUM-HEAVY TRUCKS & TRACTORS	MULTI-STOP & HIGHWAY	AA-2	MM B62 Vacuum or air actuated hydraulic brakes	FF	NOTE: All linings on this chart have approval of New York and all states having brake lining laws.	

*LIFE EXPECTANCY

AA-1. Maximum wear under all conditions. Semi-metallic linings recommended particularly for mountain driving where sustained drum temperatures may exceed 700° F. Offer approximately 25% greater life than any organic lining.

AA-2. "Carlisle Chief." Longest wearing, most stable premium quality organic lining. Recommended for all types of service except where drum temperatures may exceed 700° F.

A. "Carlisle 141." A full molded, standard organic lining equal in quality to most competitive premium quality linings. Offers much more than average life.

**These premium organic linings have been proved by billions of miles of service over all types of terrain. The only reason they are not specified for all applications is that under certain conditions, greater economy can be had by using a lining formulated specifically for the application.

***Combination sets (all organic or organic and semi-metallic) are available on special order if desired.

Select the lining that best suits your conditions

Regardless of how particular you are about specifying the brakes on your vehicles, consider that they are no better than the lining with which they are equipped.

All Fruehauf linings offer a high safety factor with stable braking even in high temperature ranges where fade is usually encountered. When a lining

fades, it is not braking and not bearing. Users should consider that performance and safety are of prime importance. Life without performance is no bargain. Since braking friction develops heat causing brake lining wear, proper brake balance and the use of heavy duty cast drums help reduce lining temperatures and prolong the life of any lining.

LIFE EXPECTANCY

- AAA. Maximum wear under all conditions. Semi-metallic linings recommended particularly for severe duty where sustained high temperatures may exceed 700° F. Offer approximately 25% greater life than any organic lining.
- AA. Fruehauf 'Chief' Organic linings wear under severe conditions under heavy organic lining. Offer approximately 50% greater life than Fruehauf 'Brave' linings recommended for all types of service except where temperatures may exceed 700° F.
- A. Fruehauf 'Brave' A low-maintenance standard organic lining ideal for general service conditions under all linings. These standard organic linings have been proved by millions of miles of service over all types of terrain. The only reason they are not specified for all applications is that under certain conditions greater economy can be had by using a lining formulated specifically for the application.
- *Combination not all kinds of organic linings and metallic linings are available in special order or treated.
- **Fruehauf organic D39, D18 and D18M are suitable for sanding.
