Monsanto Chemical Compa[illegible]

Memorandum

Anniston, Ala.

TO Mr. Weaver

DATE 11/7/41

SUBJECT AROCLORS

We still have open S No. 3090 for $1200 covering "Equipment for Electric Tests on Aroclors" with $324 available for completion.

The equipment now on hand is apparently suitable for the determination of dielectric constant which was the primary purpose. By the addition of a test cell and possibly a guard the equipment can also be used for the determination of power factor. A recommended form of test cell is said to cost $120 but the manufacturer just does not reply to letters of inquiry.

Inasmuch as there seems to be no immediate requirement on power factor, can this part be dropped? If so, we will purchase an instrument cabinet for the present equipment which will then allow us to close this work order.

P Gerber

Mr. Gaber:

Per your memo to the writer relative to purchase of test cell for determining power factor, please give Mr. Sanders the full details and ask him to get you the necessary information.
