WHITER PAINTS AT LOWER COSTS WITH

TITANOX-B

Many paint manufacturers, seeking to improve their products and at the same time to reduce costs, have discovered in Titanox-B the ideal pigment. They have found that this modern pigment not only produces the whitest paints ever made . . . but that Titanox paints retain their whiteness through years of service.

When you combine exceptional whiteness and chemical stability with other well-known features of Titanox-B . . . high bulking value, uniform particle fineness, high hiding power, ready mixing qualities and moderate price . . . you have sufficient reasons for the fast growing popularity of Titanox-B. Alert manufacturers realize that with all these desirable properties, it is logical that Titanox-B paints should appeal to paint buyers everywhere.

Ask us to assist you to adapt Titanox-B to your paint formulas. Write for detailed information and prices.

CONSIDER THE NEW LOW PRICES ON

TITANOX-C

Recent price reductions on Titanox-C (calcium base) provide an exceptionally important reason why paint manufacturers should study the various ways in which this modern pigment will reduce costs and at the same time improve quality.

Users now appreciate that Titanox-C saves grinding time. Because of its dispersive properties, it shortens the manufacturing operations. In many instances grinding has been entirely eliminated by using Titanox-C.

Here are other important reasons for adopting Titanox-C. It has high bulking value, exceptional hiding power and its high degree of whiteness is essential to quality paints. The fast growing popularity of Titanox-C is ample proof that this economical pigment makes paint that meets the demands of the discerning buyer.

Write today for new low prices on Titanox-C. Full information will be gladly furnished without obligation.

AD-40

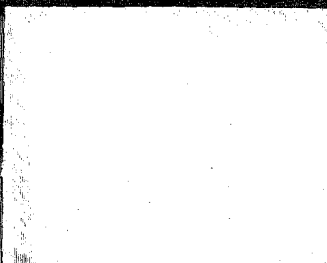

If a cheap paint job costs
\$250 and lasts 2 years that's \$125 a year

If a Dutch Boy job costs
\$270 and lasts 4 years* that's 67.50 a year

 Saving for 1 year 57.50
Saving for 4 years \$230.00

"CHEAP" PAINT... after 2 years here see it has cracked and peeled... protection is gone. Some one thought this paint was cheap.

DUTCH BOY... after 4 years. Except for some weathering, still in good shape and fully protecting surface the cracking and scaling here.

*And most painters say it's good for 5 or 6 years

The mistake the user of "cheap" paint makes is in thinking of paint simply as a commodity, and not as a service. You can't judge a paint by its cost, by the amount you pay per gallon of paint.

It's the service it gives... the way it lasts... that counts.

A Dutch Boy paint job, for example, costs more than "cheap" paint. But it's a long-term investment. It saves costs in the end. For instance, it's more durable and lasts longer. It's a paint that doesn't crack or scale. It doesn't require burning and sanding. It's an expensive operation. It's a paint that lasts. It's a paint that's prepared especially for painting.

Next is paint time, when an established painter arrives with Dutch Boy White Lead. A good painter, you know, is quite as essential as good paint. Using Dutch Boy White Lead, he will mix the paint for the particular requirements of your job. He will then apply it with care, so that it's evenly covered and it's free of brush marks and streaks. And as for the finish, it's smooth and beautiful. It's a paint that's worth the extra cost.

SALES AND SERVICE

For more information, contact your local Dutch Boy distributor. They will be glad to help you choose the right paint for your job.
