PLAINTIFF'S EXHIBIT

GP-2003

...to your letter of April 30, I believe the following ... your questions:

... for the bedding and topping with the following ... number - ...-7891 R & D 347.

... are using the same formula for bedding and topping ... we recognize two things: a) It is impossible to formulate ... product without making corrections resulting from ... tion gained as a result of field tests. The formula ... what you state the requirements that we try to formulate ... of these products. Any further changes to either product ... to be based on field experience. b) Using the same ... for the trial products will require less of your valuable ... time.

3. You can use your own judgment in the type of bag to use. ... findings were that if we could successfully introduce this ... in SRA bags, it would be a way to utilize the bags that ... and Chicago have in stock.

4. The formula is a vinyl adhesive based product. It would be compatible with your Triple Duty or Ready Mix filler but not ... certain products.

5. The specification for gendriv 492S is raw material specification number 223 (dated 12/13/70).

6. We are in the process of investigating raw material test ... for Attapul ... will send the specification out as soon ... it is finished. The specification will set the following standards for acceptance:

| a) Particle Size: | Minimum | Average |
|---|---|---|
| -50 mesh | 100.0% | -- |
| -100 mesh | 99.9 | 99.99% |
| -200 mesh | 99.5 | 99.90 |
| -325 mesh | 99.0 | 99.70 |

b) Material should be free of grit and hard lumps.

c) Color: Light cream (variable)

It should also be noted that in addition to replacement of asbestos, [illegible] would have an approximate raw material cost of $.25 [illegible] less than casein topping.

[illegible] would be happy to answer any further questions.

W. N. G.

[illegible]
