J. C. Jackson, President

DATE: January 11, 1977

SUBJECT: Value Engineering Project

As you know, early completion of the value engineering program is a pressing priority item for AACPP. Based on the presentation made by Smith, Hinchman and Grylls (SH&G) at the Fall Meeting, it is acknowledged that there are deficiencies in the work done to date. I have met with SH&G and voiced these concerns. It was decided SH&G should consolidate what work had been done to date in a draft bulletin to enable a constructive critique to be made by AACPP's Ad Hoc Review Committee. This draft bulletin is enclosed.

The bulletin is not totally representative of what AACPP staff considers satisfactory for the industry's needs. It is forwarded for the purpose of identifying where we are, where we want to be, how we might best revise/expand the document to satisfy industry's needs and aspirations. I would ask each of you to constructively critique the document, identify deficiencies, and develop an itemized list of information which should be added to supplement that already proposed by SH&G. So that the time required to bring this exercise to completion can be minimized, I have set up a review meeting with SH&G at 9:00 a.m., January 26, 1977 at AACPP's office in Arlington, Virginia. I would hope each of you would be in a position to attend, or at the very least provide a written summary of your critique and suggestions prior to the meeting date. Should any of you have questions, please give either me or John Welch a call.
