

From the desk of

DR. ROBERT A. KEHOE

Discussion with Harry Doyle
at time of meeting of Advisory Committee

1) The problem of leaded gasoline
which is now under investigation

It's significant

the question at issue

the answers - that's all

What is desired by D.S.P.

4) The recent issue of Concentrate
mixtures at filling stations,
the action of Ethyl in response
to the presentation of the
issue

March 27, 1959

Mr. Henry Doyle
Occupational Health Program
Division of Special Health Services
Department of Health, Education and Welfare
Washington 25, D.C.

Dear Henry:

I send you herewith 25 copies of a notation and a list of typographical errors in the recent report. If you would be good enough to send a copy to each of the persons who have received copies of the report, the latter will be put in order.

I was out of my office when the initial copy was completed and thus did not have a chance to go over it before the completion of the task and the issuance of the report. I did proof-read the mats, but evidently I missed some errors.

Sincerely yours,

R. A. Kehoe, M. D.
