HOW THE SILICONES MAN HELPED...

MAKE THE TAPE THAT FORMS A PERFECT SKIN

Wrap a fully cured tape of this new silicone rubber around a cable . . . in a short time it fuses into a homogeneous mass! Press a molded or extruded piece of this rubber into position and it will stay firmly in place. From research at UNION CARBIDE, the Silicones Man brings you the world's first *fusible*, silicone rubber.

This new product has all the properties usually associated with premium silicone rubber . . . outstanding high temperature performance, good electrical and oil resistance, excellent reversion resistance among them. You can well imagine the many applications in electronics gear, high temperature locations . . . how assembly work will be speeded by "press-in-place" construction. Here is another example of how the specialized knowledge of the Silicones Man has helped solve an "impossible" problem.

Write for data on "Fusible Silicone Rubber" or any of the many other silicones products available through the Silicones Man. Address Box FI-9706 Silicones Division, Union Carbide Corporation, 30 East 42nd Street, New York 17, N. Y. (*In Canada:* Bakelite Company, Division of Union Carbide Canada Limited, Toronto 7, Ontario)
