

ETHYL GASOLINE CORPORATION
CHRYSLER BUILDING

New York, October 25, 1937

Circular Letter
No. W-255

COPY FOR MR. Dr W. F. Machle

TO ALL DIVISION MANAGERS

Gentlemen:

Dr. Machle calls our attention to the fact that a number of samples have been received on which he has inadequate information. In order that full value may be received from analyses of the samples it is necessary that he have the history of the blending tanks as will be given on sheet No. 1 and sheet No. 2 of the Medical Department if they are properly filled out and forwarded to him. Dr. Machle realizes that full information may not be available but as much information as can be given should be supplied. On sheet No. 2, in which a list of the tanks is given, the only tank that is necessary to report is the one from which the sample was taken. This is not a criticism of the safety men's work in the past, as we realize the original instructions were for them to tabulate data only on tanks at blending locations or spiked points.

Safety representatives are not taking samples from jobbers' tanks any more. They should still bear in mind, however, that the information on the Medical Department's sheets should be supplied to cover all sludge samples that are picked up from all tanks of our customer companies, whether refinery, terminal point or marketing tank.

Attached is a list of the samples upon which additional data should be given. We would appreciate your securing this as promptly as possible on the samples that come within your division and forwarding it in the regular way to Cincinnati. A copy to this office will keep us informed on the progress being made in this important work.

Very truly yours,

J. C. Taylor

By

W. F. Machle
