Dr. Robert A. Kehoe
University of Cincinnati
College of Medicine
General Hospital
Cincinnati, Ohio

Dear Doctor Kehoe:

I wish to acknowledge your letter of July 2, 1937, which although addressed to Dr. Forrest Barry was turned over to me because of the fact that I am now here on a full-time basis. I have had occasion to send you two or three samples of urine lately which I do not suspect will show anything out of the ordinary. One case, in particular, which seems to show more striking physical findings than the others has a history of having done nothing but work with copper for the past five years.

There is hardly a day goes by but that one of the men whom we examined together here a few weeks ago asks if you have sent your report along. They are extremely interested in knowing the results. Upon asking one man the other day if he had been one of the group he said "No, I was not fortunate enough to get in on it", so you can see that anything that I have heard about the research or the way it was conducted is of the most complimentary type.

I sincerely hope that the summer has not been too warm in Cincinnati and that you and Mr. Duval find opportunity to get to some good lake and investigate what makes the water ripple along about sundown.

Cordially yours
