Mr. N. W. Touchette
2nd St.

Norm,

As we discussed over the phone, would you please prepare one-quart samples each of Santicizers 401 and 415 for transmission to me, and for ultimate transmission to the Canadian Import Authority, via our MOCAN associates. The Santicizer 415 sample should be taken from the material stripped recently in the pilot plant, and the Santicizer 401 material should be made from approximately 97 parts of Santicizer 415, and 3 parts of DIDA.

We're sending these samples to the Canadian authorities to prove that they are not made-in-Canada materials and in advance of our commercial development activities on these products in Canada and their probable evaluation and use by our associates at Oakville.

Thanks, Norm.

R. M. Parks
