

ETHYL GASOLINE CORPORATION

CHRYSLER BUILDING
405 LEXINGTON AVENUE

NEW YORK

INTER-OFFICE
CORRESPONDENCE

November 13, 1941

Dr. R. A. Kehoe
Cincinnati

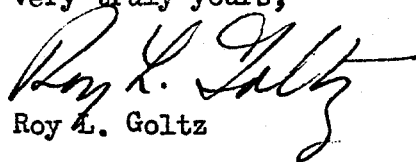

Dear Dr. Kehoe:

A Mrs. [REDACTED], 1569 - 47th Street, Brooklyn, New York, telephoned us today to talk about her husband who operates a Gulf Oil Corporation dealer station at 111 Neptune Avenue, Brooklyn. It appears that her husband has acquired a skin rash or irritation which their physician believed was due to exposure to the leaded gasoline handled at his station. The physician in question evidently believed that breathing the fumes was largely responsible.

I was able to obtain from Mrs. [REDACTED] the name of this physician - a Dr. Hyman Colin, 1613 - 44th Street, Brooklyn, who happens to be Mrs. [REDACTED] brother. I then telephoned Dr. Colin and without discussing Mr. [REDACTED] case or commenting upon it in any manner, suggested that he write you direct, giving you the necessary details which in turn would enable you to reply with whatever suggestions you felt were in order. Dr. Colin seemed very glad to have this opportunity to consult with you, so probably by the time you receive this letter you will likewise have heard from him.

The Gulf Oil Corporation is acquainted with the case and is not at all alarmed, as they feel that it is similar to other experiences called to their attention in the past. Neither they nor ourselves will take any further action unless we hear from you to the contrary.

Very truly yours,

Roy L. Goltz
