Dear Dr. Cole:

The enclosed letter explains itself. Did you get a chance
to think about this subject?

Thank you,

A. C. Titus

Dear Mr. Titus:

Ref. #19742US Lead Test

I have your letter of February 25, 1971 and unfortunately there is no simple method of testing for lead in paint.

Insofar as the suitability of the test method enclosed with your letter, I am not qualified to judge and therefore in no position to offer you an opinion.

However, Dr. J. F. Cole of the International Lead Zinc Research Organization may have some comments and I am referring your letter to him. Unfortunately, I have just found out that Dr. Cole is presently in Europe and will be returning around the middle of April at which time you will probably hear from him.

I sincerely hope that this delay does not inconvenience you too much.

Sincerely yours,

David M. Borcina
Secretary, Treasurer
