Confirming our conversation, you are authorized and requested to provide the temporary piping, etc., necessary to achieve storage capability in the new 100,000 gal. Biphenyl storage tank by May 15, 1968.

It is my understanding that the expenditure for temporary facilities will be expensed and will be about $3000 - $5000. I also understand that we can expect to be able to pump out of this tank about 30 days later.

The system will be ready by Friday 5/24. The holdup has been installation. We now have the material and construction is starting to apply it this morning. It was found that with very little effort provisions could be made to pump out of the tank also. Consequently, you will be able to unload tankcars in to the tank and pump out of the tank in to the W&K system by Friday.

WAK.
