LABORATORY WORK REQUEST 65-I-1/PRIORITY A + + URGENT

Chuck Bias
QUEENY PLANT

Chuck, this will confirm our conversation of January 6, in which I requested that the dry cell volume resistivity at 25°C be run on our HB-40 as well as Cereclor 8-52.

Shawinigan in Canada is requesting that our material meet the dry cell volume resistivity at 25°C of 50×10^{13} ohm cm.

Shawinigan is calling about every three hours for this information so I would appreciate anything you might do to get this worked out as soon as possible.
