Subject: FW: Inco Docs for Dr. Castleman

Date: Mon, 17 May 2010 16:13:22 -0400

From: Dave Chervenick <dchervenick@gpwlaw.com>

To: Barry Castleman <barry.castleman@gmail.com>

Hi Dr. Castleman. I have 6 cases in the upcoming WV trial group and will be on the phone for your depo tomorrow. International Nickel Co. plant in Huntington WV from 1965-1995. I have attached some INCO docs provided on a disk, they were among several thousand docs provided by INCO. As you can see, there is a 1935 memo from a meeting dealing with silicosis which deals with ways to prevent silicosis. I have included several safety memos mentioning asbestos cloth and the need to put the cloth back on the shelf, but no warnings about breathing the dust emitted from the cloth, I have also included a 1965 IHF report by Morton Corn which discusses the TLV, but not for asbestos, and makes it clear that the TLV was not a bright line between hazardous and non hazardous. I have some old interrogatory answers from INCO, not included here, wherein they state that they didn't even hear about a TLV until 1976. They admit to being members of the NSC from the 1940's through the 1980's, and they say that they were members of the IHF. I have some IHF surveys of their plant going back into the 1940's.. Since my client was employed there, we need to prove "deliberate intent", which is basically gross negligence.

Dave Chervenick
