Gentlemen:

As part of our regular survey of industrial plants in the Maryland area, this Laboratory is very interested in learning more about the composition and toxicity of various commercial products that are being used daily by the workers. This information helps us to locate and correct hazardous working conditions where they may exist for the men and women who are constantly being exposed to these materials.

Recently this Laboratory received a sample of one of your products, "JOINT COMPOUND - ALL PURPOSE - Code 1028 N 18". Any information you may furnish us concerning the composition and toxicity of this product would greatly assist our program.

Of course, any information furnished would be held strictly confidential.

Thanking you, I remain,

Very truly yours,

Kenneth M. Hallam
Kenneth M. Hallam, Chemist
