Bill Richard and I have contacted Dick Baxter to see whether or not there is any concern about traces of chlorodibenzofurans in chlorinated biphenyl products in Europe.

He indicated that he had not heard any concern about the chlorinated biphenyl products but had heard some about pentachlorophenol.

We told Baxter of our program to establish whether or not there are chlorodibenzofurans in our chlorinated biphenyl products and asked him to have Alf Vodden contact Beyer to see if they had any information or analytical methods. Alf is to call you. If he does not, you are to call him Tuesday or Wednesday of next week.

We requested samples of Aroclors 1342, 1254 and 1260 and of Beyer and Prodelec equivalents to be included in your study.
