May 1, 1962

Dr. W. A. Knapp
Research Dept.
General Chemical Division
Allied Chemical Corp.
Morristown, N.J.

Dear Dr. Knapp:

In compliance with your telephone request of April 25, 1962, attached is a chromatogram of vinyl chloride monomer from cylinder V-134101. The purity of this monomer is 99.9+% vinyl chloride as evidenced by the chromatogram.

Five cylinders were loaded by the Moundsville Plant with vinyl chloride monomer from #3 storage on January 15, 1959. Four of these cylinders, Numbers V-210081, V-210071, V-210079, and V-210075 were shipped to Yale University Laboratory, New Haven, Conn. The fifth cylinder, V-134101, was retained as a reference sample by the Moundsville Plant.

If we can be of further assistance, please advise.

Sincerely,

P. B. Cornell
Manager

WCS/sb
