Dear Sirs,

I have been told that an investigation - probably sponsored by the CARBORUNDUM CO - has been made at your laboratory in 1963, concerning the problems of hygienic and medical risks by using bakelitebound grinding wheels with resinoid fillers, specially such additive materials as Lead, Antimony, Cryolite.

Could you please tell me where the results of this investigation are published - or, if possible - rather send me a report-copy or a brief summary of it.

I understand that it will mean a little bit of extra work to you, but I should appreciate very much if you could help me as soon as possibly.

Yours faithfully,

Olof Hallström
