Dear Dr. Kleiner:

At the request of Dr. Dernehl, Assistant Medical Director of our Industrial Medical and Toxicology Department, we are sending you without charge five pounds of VINYLITE resin VHH #1. This resin is available in commercial quantities and may be ordered from the Bakelite Company, P. O. Box 344, New York 8, N. Y.

Yours very truly,

H. F. Robertson

New York 17, New York

Dear Dr. Dernehl:

Thank you for your letter of January 12. We anticipate using "Vinylite" resin for injection studies of lungs in various experimental and clinical conditions. These procedures have been described by Dr. A. A. Liebow of the Department of Pathology at Yale University.

We are now in the preparatory stages of this investigation, and we are not able to adequately foresee our ultimate needs for this compound. However, if you could furnish us with several pounds of this material, we would certainly be able to work out our methods. If it is not possible for you to furnish us with this compound, we of course would be very happy to reimburse you.

We are extremely eager to start our work and would appreciate your prompt attention in this matter.

Sincerely yours,

Jerome Kleinerman

Dear Dr. Kleinerman:

In reply to your letter of January 6, 1956 to our Bakelite Company regarding information about "Vinylite" resin VYHH Specification 1, I can give you the following data. This material is a copolymer of vinyl chloride and vinyl acetate with the vinyl chloride being present slightly in excess of 80 per cent. It is sold as a fine flour without added stabilizers or plasticizers.

It would be helpful to us to know the proposed application for this material. If it is intended to convert the flour into film for use on humans, your attention should be directed to a recent publication:

"Further Studies of Polymers as Carcinogenic Agents in Animals," B. S. Oppenheimer, CANCER RESEARCH, 15:333-340, June, 1955.

While this paper demonstrates the development of malignancies after film implantation in animals, this is no proof that similar responses will occur in man. Even though such responses have not been observed in humans, the possibility must be considered. Otherwise the resin is considered to be physiologically inert.

If the quantity of material desired is not large and the application is suitable, I feel sure that a supply can be made available without charge. Information on the proposed use will expedite action on our part.

Very truly yours,

ASSISTANT MEDICAL DIRECTOR

C. U. Dornahl, M. D.

Gentlemen:

We are interested in your product, VINYLITE, (VYHH, Specification #1) for purposes of Medical Research.

*Bakelite
14.1*

Information as regards composition, cost, delivery dates, and other pertinent information will be greatly appreciated.

May we hear from you soon?

Sincerely yours,

Jerome Kleiner
