R. M. Kountz - G2WD
J. R. Savage - B2SL
D. Wood - B2SD

TO W. B. Papageorge - B2SK

R. Baxter reports Inveresk-analytical studies will be completed by Lidgett week of July 4. Vodden will interpret results week of July 7. Informed of legislative pressure.

Pond experiments - Still unhappy about PCB in water value - building extraction apparatus. I indicated some information was more valuable than waiting for perfect data. Baxter to inform Vodden we want interpretation of results to date. Call Mason if no result. Marsh and Baxter will both be away for next 4 and 2 weeks respectively.

Chlorinated dibenzofuran - See note from R. Munch covering the status with Europe.

Aroclor 1260 vs. Aroclor 1254 - Have made blends with TCB and Aroclor 1254. Report some increase in attack on varnish in ASEC transformers. Really awaiting a decision if they have to move to Aroclor 1254. Informed R. Baxter about EIA report and medical consultant.
