J. P. McNally, M.D. - Berlin
R. J. Sepessy - Tower 19

I have reviewed the write-up which will be presented during the week of August 23 and given as a handout to both Union and membership and physicians of employees who request results of tests.

The draft is acceptable and closely follows the recommendations I made in my revised draft of June 24, 1971.

It is noted that you deleted the paragraph concerning the relationship between asbestos over-exposure and cancer. I am assuming that you are saving this for the question period following the presentation. If a question concerning the relationship between asbestos over-exposure and cancer does not arise, at a later date this relationship should be discussed with the workers. If you so desire I will draft a write-up on this topic. Please let me know your wishes.

It is most important in discussing the relationship between asbestos over-exposure and cancer that YOU DO NOT use the sentence quoted which was included in my June 24 draft on Page 3, second paragraph which stated:

~~"To date, these tumors have not occurred in employees working in plants manufacturing the type of insulation material produced here at Berlin any more frequently than in the general population."~~

~~This statement cannot be substantiated on further checking and, is inaccurate. Please delete this sentence from the draft which was supplied to you dated June 24, 1971.~~

If you have any further questions or comments please let me know.
