ACCIDENT ANALYSIS MONTHLY BULLETIN

JANUARY, 1966

HIGHLIGHTS

The 1966 Control Charts have been changed in that the goal line shown is the 1965 performance. This may or may not be the best previous year's performance. This change provides for comparison of trend changes during 1966 to data which is current and more realistic.

The total number of incidents reported during January were above the number reported for the same period last year.

More Slips and Falls incidents are expected to occur during February and March than for any other period during the year. Departmental safety meetings and personal contact safety talks should cover prevention of this type accident.
