FEDERAL REGULATIONS

OSHA has issued some new regulations which are effective immediately. The first is that no loose asbestos should be swept up, but must be picked up by vacuum collection. We do have a vacuum cleaner by #1 and a new sweeper vacuum cleaner has been ordered. The regulations also discuss the wearing of respirators. Effective immediately, all personnel hand unloading asbestos fibre bags from the cars must wear a respirator. There can be no exception to this rule as it is the law of the land.
