SUBJECT THIOKOL/AROCLOR 1254

REFERENCE

cc: J. R. Darby - Res. JFQ
W. A. Kuhn - WKUHN
W. F. Waychoff

(1) Dallas Armstrong Kremnitz Plant

TO (2) W. R. RICHARD
WRICH

I refer to your recent telephone conversation with Joe Darby. We wish to avail ourselves of our kind offer to send us 10 gallons of Aroclor 1254, which has been obtained by cutting into the last 25% of the Aroclor 1254 distillation. We will submit some of this material to Thiokol to determine if it is satisfactory, as regards to staining in a polysulfide sealant. If it is acceptable to Thiokol, then we will set up a specification on the retained material with regard to percent volatiles GLC analysis, or whatever is necessary to assure ourselves that we can supply Thiokol with satisfactory material. I do not feel that the use of Thiokol's staining test would be applicable as a routine quality control test for the plant. It is certainly our intention to try to obtain a premium for this material. However, if production of this lower volatile Aroclor 1254 involves us in extra cost, I would appreciate knowing how much this is so that it can be taken into account.

Charlie Howlett
Check with H. Ray to see if the 5 gal. cans of high temp Aroclor have been sent to Joe Darby. I asked for an untreated sample (5 gal) at end of boil down, and 5 gal of high temp earth treated 1254. We may not have made 1254 lately.
