Wire Mesh Grille especially designed for vessels, industrial plants, and Army barracks. Made of $\frac{1}{2}$ in. square mesh heavy wire with rugged frame.

Return Grille G-2 with close mesh fixed directional fins. Fins set on $\frac{1}{4}$ in. centers in deflection desired. Also available with vertical fins.

Adjustable Wood Louvre Grille to replace critical steel in Defense Plant installations. Available in three styles. Wood louvers are spaced on 1 in. centers with steel border and duct flange.

FH-100 Forced Air Register for residential application. Simple operation, quick shut-off. Easy to clean.

Supply Grille E-1 with both front and rear louvers streamlined and individually adjustable. $\frac{3}{4}$ in. blade spacing.

Zeph-O-Cone Marine Air Diffuser diffuses high entrance velocities rapidly and quietly. Sizes for 100, 150, 200 and 300 cfm at 2000 fpm inlet velocity.

Techni-trol Air Volume Damper all louvers operate by linkage arrangement to reduce air volume without changing direction. Lever or key controls.

Techni-Louvre Air Control Device provides uniform distribution of air for entire outlet. Each vane is composed of two separate leaves independently adjustable. Dull Black finish.

Blackout Louvre is lightproof, sightproof, and weatherproof. Allows maximum passage of air while preventing escape of light rays. A convenient inside handle provides easy adjustment. It is made of steel, bonderized, and painted dull black. Available for vessels and industrial application.

Marine Supply Register with multi-louvre damper and ring loop for pole operation. Extra screwholes provided for stronger attachment needed on vessels. Friction points made of non-ferrous materials.

All products made of steel receive Parker "Bonderizing" process prior to painting.

Engineering Data for horizontal diffusion of cool air is available for selection of proper velocities, number and size of outlets.

Choose the Correct ARMCO Grade

These grades of ARMCO sheet metal are recommended for the air conditioning applications shown. For detailed information get in touch with the nearest district office or write direct to The American Rolling Mill Company, Middletown, Ohio.

ARMCO Ingot Iron (Galvanized)

Ducts
Washer Chambers
Plenum Chambers
Steam Line Casings
Furnace Casings
Spray Towers
Drip Pans
Housings
Machine Guards
Unit Conditioners
Roof Ventilators
Eliminator Blades

ARMCO PAINTGRIP (Galvanized)

A special mill-bonderized galvanized sheet that can be painted without pretreatment. Preserves life and beauty of paint.

Hot Rolled (Sheets and Strip)

Fan Blades
Blower Casings
Fuel Oil Tanks
Unit Conditioners
Stoker Hoppers

ARMCO ZINCGRIP

A special zinc-coated sheet, that can be severely formed without peeling or flaking of the tightly adherent zinc coating.

Other ARMCO Products

The grades for these applications are only a few that ARMCO makes. Others include copper-bearing sheets and plates and open-hearth steel, either galvanized or uncoated.

Cold Rolled (Sheets and Strip) Furnace Casings Room Unit Casings

Plates (ARMCO Ingot Iron) Smoke Stacks Coal Hoppers Breeching Unfired Pressure Vessels Low-fired Boilers Tanks

ARMCO High Tensile

A low alloy, high tensile steel possessing great strength. Used with proper design it results in weight reduction of framework, tanks and similar items. Under atmospheric service conditions it has four to six times the endurance of regular steel.

Stainless Steel (Sheets, Strip and Plate) Combustion Chambers Heat Flues and Tubes Humidifier Pans Pre-heaters

Furnace Parts and Supports Fan and Blower Blades

Special grades have excellent resistance to destructive heat-scaling up to 2000 F.
