I thought you might find the attached letter from Dr. David Epel, Stanford University, interesting. I met with Dr. Epel on February 14th after he had requested a meeting to discuss PCB's. He is preparing an address to be given before the Commonwealth Club of California in April. I found Dr. Epel to be an objective, intelligent, well-informed individual, however, I strongly suspect that regardless of what he thinks of Monsanto personally, he will side with the conservationists whenever any doubt exists.
