

ADDITIONAL INFORMATION

- * X-ray films of the chests of many (not all) of the men in the older age group
- ** The terminal samples (in addition to those in May and June, were obtained in July and August; these included specimens of both urine and blood.

The survey, with respect to exposure to lead of the men engaged in these occupations extended, therefore, over the period from May of 1959 to August of 1960, i.e., 16 months.

Hematology: All findings within normal limits

Terminal laboratory findings in blood show improvement over initial findings.

Chest Films: 36 persons only - older responsible employees

10 - Service station managers, San Francisco,

5 - Tank-truck loaders, 5 Blenders, 5 - Barrel fillers

3 - Laboratory personnel, 3 - Wharf inspectors.

Nothing remarkable noted in films.
