Multicomponent Batch
Distillation Program

B30612 File

R. A. Atkinson - Nitro

Rick, Carl Di Bella informed me that you were interested in receiving a copy of the manual describing the multicomponent batch distillation program. I have mailed the manual under separate cover, and it should arrive there shortly.

Minor corrections have been made in the program since the July 1968 distribution date. However, these changes do not alter in any way the input data specifications or options listed in the manual. Changes made in accessing the program for execution have been corrected in the text.

The following list will give you some idea of the areas in which the batch distillation program has been applied:

1. Polyimide solvent recovery (Bircham Bend)
2. Nonylphenol distillation design (CED)
3. Diethylaniline distillation design (CED)
4. Trichloropropene distillation design (CED)
5. Ethacol distillation cycle time (Queeny)

I am the contact for fielding questions and assisting users of the program. If I can be of any help to you or anyone else at Nitro, don't hesitate to call.
