Attention: Mr. John R. Fallon

Gentlemen:

Monsanto's decision to discontinue the sale of its Therminol FR series fluid in food processing plants came as a complete surprise to Foremost-McKesson, Inc. Through sales literature and engineers from Monsanto, Foremost was induced to install at its Jiffy Fry plant a heat transfer system using Monsanto's Therminol FR-1 fluid. Foremost has been completely satisfied with the FR-1 fluid and fails to see any great threat of PCB contamination to food products inasmuch as the FR-1 fluid is used only in a completely sealed system.

Foremost has not at this time been able to make a decision relative to Monsanto's refusal to sell its Therminol FR series products. However, should a change be necessary please be advised that Foremost fully intends holding Monsanto responsible for any and all costs associated with any such change.

Very truly yours,

Robert A. Fuller
