O. B. LEWIS
CHAIRMAN

Dr. R. A. Kehoe
Kettering Laboratory of Applied Physiology
College of Medicine
Eden Avenue, Cincinnati, Ohio.

Dear Dr. Kehoe:

Attached hereto is a letter from the Reliance Oil Company.
You have probably received our letter of February 21st on this same
matter. We feel this should be handled and if you agree with us,
would appreciate your giving it your attention.

Very truly yours,

W:GCL
Enclosure

Ethyl Gasoline Corp.,

New York City.

Dear Sirs:-

The writer wrote you a letter about two weeks ago about one of our employees, [REDACTED] having contracted an infected finger and from all indications it appears to be Ethyl Lead poisoning, at least the local doctors says so. He has been to the doctor several times and the condition does not clear up.

To avoid unfavorable publicity, I believe it is to your advantage to at least advise us what steps we should take to clear up this condition before it becomes serious. We have been advised to refer this matter to the Medical Dept. at Harrisburg for information as to what to do regarding the matter but we believe you are better equipped to advise us on the subject. All we are interested in knowing is the name of a physician in the Pittsburgh district that is qualified to examine the injury from the standpoint of lead poisoning.

Please let us hear from you.

Yours very truly,

RELIANCE OIL COMPANY

D. H. Lee
Manager.
